

Feasibility

Hypothesis: *Organizations with limited resources are willing to use the Development Ethics Toolkit when they perceive it as a more effective way to implement projects, programs, and policies.*

Goals:

- **C14 C15 C16 C17 C18** Evaluate their access to Information & Communication Technologies that allows them to utilize the Development Ethics Toolkit.
- **C19 C20 C21** Examine their current use of applications for project development.
- **C19 C20 C21 C23** Determine if the Dev Ethics tools in the toolkit are able to meet the interviewees' needs.
- **C14 C15 C18 C22** Analyze whether the presence of AI within the Dev Ethics Toolkit disincentivizes adoption of the platform

Viability

Hypothesis: *NGOs involved in development are willing to invest staff time and limited funding in an AI-assisted ethics toolkit if it helps reduce the time and cost of mainstreaming worthwhile development into the design of their projects, programs, or policies.*

Goals:

- Learn how limited funding, staff, and time affect the project planning process. **C25, C27, C28, C29**
- Identify the biggest challenges NGOs face when creating ethical project designs. **C30, C32, C25, C27**
- Determine whether NGOs view an AI-assisted development ethics toolkit as a more productive alternative to traditional approaches for addressing ethical considerations in development projects. **C33**
- Identify the perceived benefits and barriers that affect NGOs' adoption of an AI-assisted ethics toolkit, specifically among organizations with limited resources. **C26, C25, C30, C33**
- Understand how NGOs allocate resources toward ethics-related activities, tools, training, and project support, such as the Development Ethics Toolkit. **C25, C26, C24, C27**

Desirability

Hypothesis: *Development practitioners are willing to adopt new technologies that integrate into their current workflow.*

Goals:

- Discover if crowded or complicated UI/UX design causes practitioners to abandon tools.
C35 C36 C40 C41 C42
- Validate whether development practitioners prefer a full-stack service.
C37 C42
- Identify the specific features and visual layouts that development practitioners value most for efficient project management
C35 C36 C38 C39
- Analyze the pros and cons of alternative tools or competitor platforms currently used by interviewees during project development
C37 C38 C43
- Identify their willingness to adopt the toolkit into their existing workflow.
C34 C43

Ethicality

Hypothesis: *Existing frameworks overlook practical implementation guidance for worthwhile development*

Goals:

- **C1, C10, C11, C12** Understand how development practitioners currently incorporate ethics into their projects, policies, and frameworks.
- **C1, C12** Identify challenges development practitioners face when applying ethical frameworks in practice.
- **C3, C4, C5, C6, C7, C8, C9** Define what “practical guidance” means to different practitioners and whether it's necessary
- **C1** Determine whether ethical implementation is a priority for development practitioners
- **C1** Evaluate development practitioners’ willingness to incorporate new ethical standards into their existing projects, programs, or policies.
